Complete Table Code Structure

Practice

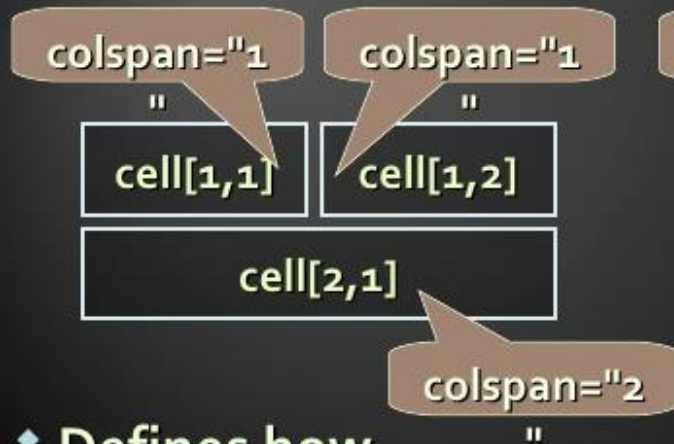

Do Ex 8.1!

Exercise 8.1	
Album	Year
Rubber Soul	1965
Revolver	1966
Sgt. Pepper's	1967
The White Album	1968
Abbey Road	1969

Column and Row Span

- Cells have two attributes related to merging

- colspan**

- Defines how many columns the cell occupies

- rowspan**

- Defines how many rows the cell occupies

Column span and
Row span
`colspan="number"`
`rowspan="number"`

Use the Minimum
Box(Purple) to Define Table
Span Unit

→ Table caption

Sachin Tendulkar

	Matches	Innings	Runs
Tests	190	314	15533
ODIs	463	452	18426
T20s	1	1	10

Caption Definition

Caption is the
Description of the Table

thead and tfoot

ヘッダ	ヘッダ	ヘッダ	— <code><thead></code> ヘッダグループ
本体A			
データセル	データセル	データセル	— <code><tbody></code> 本体グループ
データセル	データセル	データセル	
本体B			
データセル	データセル	データセル	
データセル	データセル	データセル	
フッタ	フッタ	フッタ	— <code><tfoot></code> フッタグループ

<colgroup>

This row in thead section not in tbody.

縦列のグループ化 (colgroup)

グループA	グループB		グループC	
データ	データ	データ	データ	データ
データ	データ	データ	データ	データ
データ	データ	データ	データ	データ

All of the <td> should be done like normally.
colgroup is useful for column coloring in CSS

<colgroup>

```
<table>
<caption>グループ化</caption>
<colgroup span="1" id="groupA"></colgroup>
<colgroup span="2" id="groupB"></colgroup>
<colgroup span="2" id="groupC"></colgroup>
<thead>
  <tr>
    <th>グループA</th><th colspan="2">グループB</th><th colspan="2">グループC</th>
  </tr>
</thead>
<tbody>
  ~ 中略 ~
</tbody>
</table>
```

<colgroup>

Do Ex8.2/3/4

Exercise 8.2		
7:00pm	7:30pm	8:00pm
The Sunday Night Movie		
Perry Mason	Candid Camera	What's My Line
Bonanza	The Wackiest Ship in the Army	

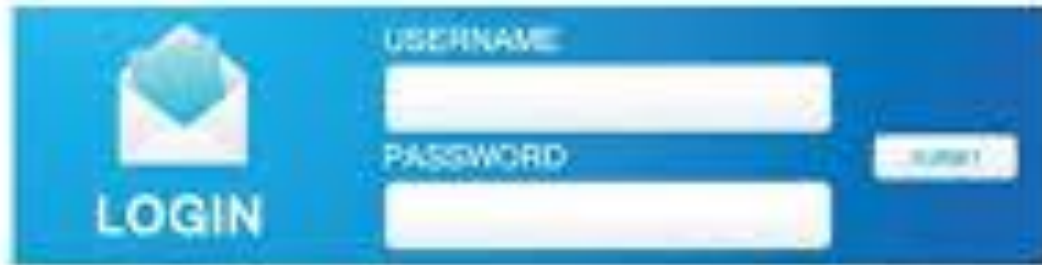

Exercise 8.3		
apples	Orange	pears
bananas		pineapple
lychees		

Ex 8.4	A common header for two subheads		Header 3
	Header 1	Header 2	
Thing A	data A1	data A3	data A3
Thing B	data B1	data B2	data B3
Thing C	data C1	data C2	data C3

DOM Model for Forms

Name Attribute for an Input Element

```
<textarea id="t1" name="comment" rows="4" cols="5"  
placeholder="Leave us a comment."></textarea>
```

- id="t1", where t1 is the id for this textarea when it is accessed in DOM model by CSS or javascript to perform style setting or behavioral coding
- name="comment", declared the variable name for the text area. This means when people input some text data in the text area of the page. The string will assigned to a variable named comment:

```
comment=This%20is%20the%20best%20band%20ever%21
```

%20 is the space, %21 is !

The Input Elements shown in Textbook

- Text Entry Controls
- Specialized text entry controls
- Submit and reset buttons
- Radio and checkbox buttons
- Pull-down and scrolling menus
- File selection and upload control
- Hidden controls
- Date and times (HTML5)
- Numerical controls (HTML5)
- Color picker control (HTML5)

Text Entry Controls

single line text entry

City

- `<label>City <input type="text" name="city" id="form-city" value="Your Hometown" maxlength="50"></label>`
- `` specify a line item element
- `<label>City <input></label>` associates the label City with the input text box.
- **name**: The name attribute is required for indicating the variable name.
- **value**: The value attribute specifies default text that appears in the field when the form is loaded. When you reset a form, it returns to this value.
- **maxlength**: limit your text string length.

Text Entry Controls

Multiple lines text entry

- `<p><label>Official contest entry:
`
 `Tell us why you love the band. Five winners will get backstage`
 `passes!
`
 `<textarea name="contest_entry" rows="5" cols="50">The band is totally`
 `awesome!</textarea></label></p>`
- **title**: title of the textarea, also used as a hint
- **placeholder**: a hint of what it is in the text field
- **rows**: row number for showing the text area
- **cols**: col number for showing the text area
- **wrap**: specifies whether the text should keep its line breaks when submitted.
 soft means do not keep it. Hard means to keep it.
- **maxlength**: sets a limit on the number of characters that can be typed into the field

Specialized Text Inputs

- <input type="password">
- <input type="search">
- <input type="email">
- <input type="tel">
- <input type="url">
- <input type="number">
- <input type="text"
list="ideselect"
name="idesl">
<datalist id="ideselect">
<option value="Visual Studio">
<option value="VIM">

Datalist Example

```
<input type="text"
      list="ideselect"
      name="idesl">
<datalist id="ideselect">
  <option value="Visual Studio">
  <option value="VIM">
```

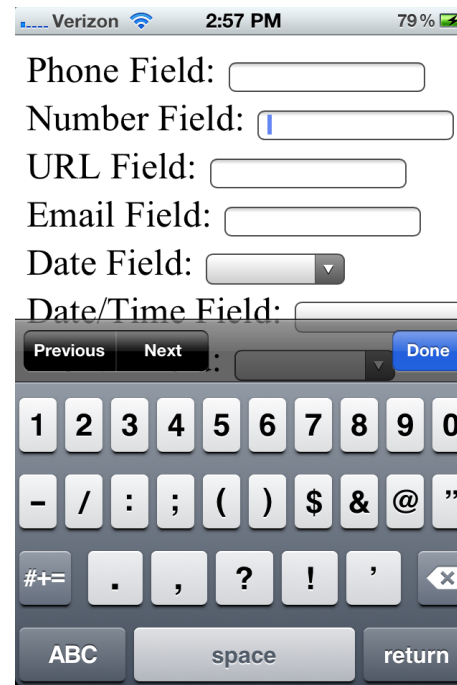

Keyboard when <input type="tel">

Keyboard when <input type="url">

Keyboard when <input type="text">

Keyboard when <input type="email">

```
<input type="password">
<input type="search">
<input type="email">
<input type="tel">
<input type="url">
<input type="number">
```

Buttons (Try Ex 9.1)

Submit, Reset, Radio and Checkbox, Image, Button, Button Element

`<input type="submit">`: submit the form to take action (client side or server side)

`<input type="reset">`: clean up the form

`<input type="image">`: use external image as the button face

`<input type="button">`

`<input type="radio">`

`<input type="checkbox">`

`<button></button>`: type some text or show some image on the button face

Radio Buttons

`<input type="radio" name="variable" value="option_value">`

`<p>How old are you?</p>`

``

`<input type="radio" name="age" value="under24" checked> Under 24`

`<input type="radio" name="age" value="25-34"> 25 to 34`

`<input type="radio" name="age" value="35-44"> 35 to 44`

`<input type="radio" name="age" value="over45"> 45+`

``

Default Value

Same variable

Value candidates

Checkbox Buttons (Try Ex 9.2)

`<input type="checkbox" name="variable" value="option_value">`

`<p>What type of music do you listen to??</p>`

``

`<input type="checkbox" name="genre" value="punk" checked>Punk rock`

`<input type="checkbox" name="genre" value="indie" checked>Indie rock`

`<input type="checkbox" name="genre" value="hiphop">Hip hop`

`<input type="checkbox" name="genre" value="rockabilly">Rockability`

``

Default Value

Same variable

Value candidates

Menu and Optional Selection

- Drop-down menus
- Scrolling menus
- Grouping menu options
- Text input datalist select (Option by user input, but Website provide options. See text input)

Drop-down menus

<p>What is your favorite 80s band

<select name="EightiesFave">

<option>The Cure**</option>**

<option>Cocteau**</option>**

<option>Tears for Fears**</option>**

<option>Thompson Twins**</option>**

<option value="EBTG">Everything But the Girl**</option>**

<option>Depeche Mode**</option>**

<option>The Smiths**</option>**

<option>New Order**</option>**

</select>

</p>

Scrolling Menus

<p>What 80s bands did you listen to?

<select name="EightiesBands" size="6" multiple>

<option>The Cure**</option>**

<option>Cocteau**</option>**

<option selected>Tears for Fears**</option>**

<option selected>Thompson Twins**</option>**

<option value="EBTG">Everything But the Girl**</option>**

<option>Depeche Mode**</option>**

<option>The Smiths**</option>**

<option>New Order**</option>**

</select>

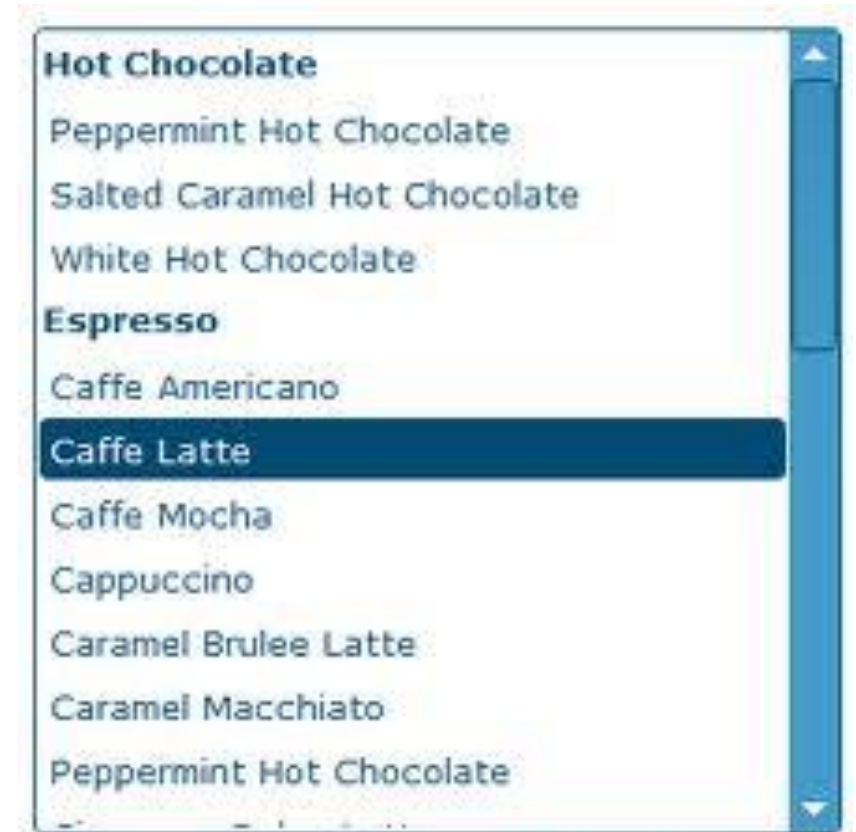

</p>

Grouping menu options (Do Ex. 9.3)

```
<select name="icecream" size="7" multiple>  
  <optgroup label="traditional">  
    <option>vanilla</option>  
    <option>chocolate</option>  
  </optgroup>  
  <optgroup label="fancy">  
    <option>Super praline</option>  
    <option>Nut surprise</option>  
    <option>Candy corn</option>  
  </optgroup>  
</select>
```

File Selection Control

```
<form action="/client.php" method="POST"
      enctype="multipart/form-data" >
  <label>
    Step 1: Select a file.
    <input type="file" name="uploadfile" size="28">
  </label>
</form>
```

Firefox Style

A light blue dialog box titled "upload file". It contains two steps: "Step 1: Select a file." with a text input field and a "Browse_" button, and "Step 2: Click the button below." with an "Upload file" button.

Chrome Style

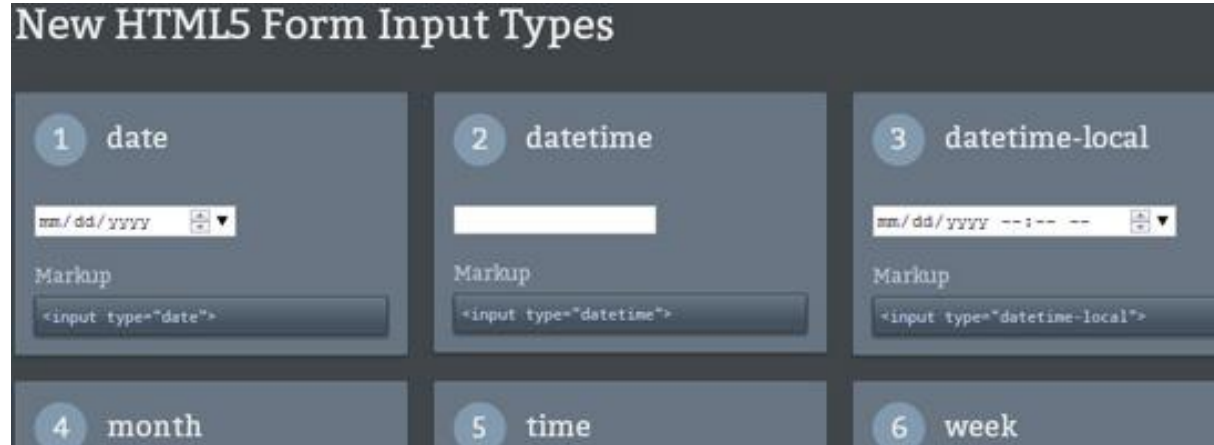

A grey dialog box titled "Add Document". It has a "File Upload" tab. Below the tab, there is a "Choose File" button followed by the text "No file chosen". At the bottom, there are "Upload" and "Cancel" buttons.

Hidden Controls

- When the webpage want to initiate a form processing action which does not require user's input, the hidden control can be used.
- Javascript script can generate a form format and then mark it as hidden and send to the server.
- `<input type="hidden" name="success-link" value="http://www.example.com/littlechair_thankyou.html">`

Data and Time Controls

`<input type="date">`

`<input type="datetime">`

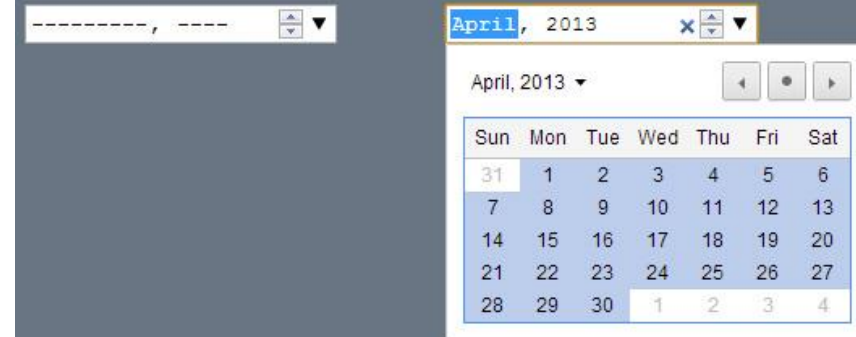

`<input type="datetime-local">`

`<input type="time">`

`<input type="month">`

`<input type="week">`

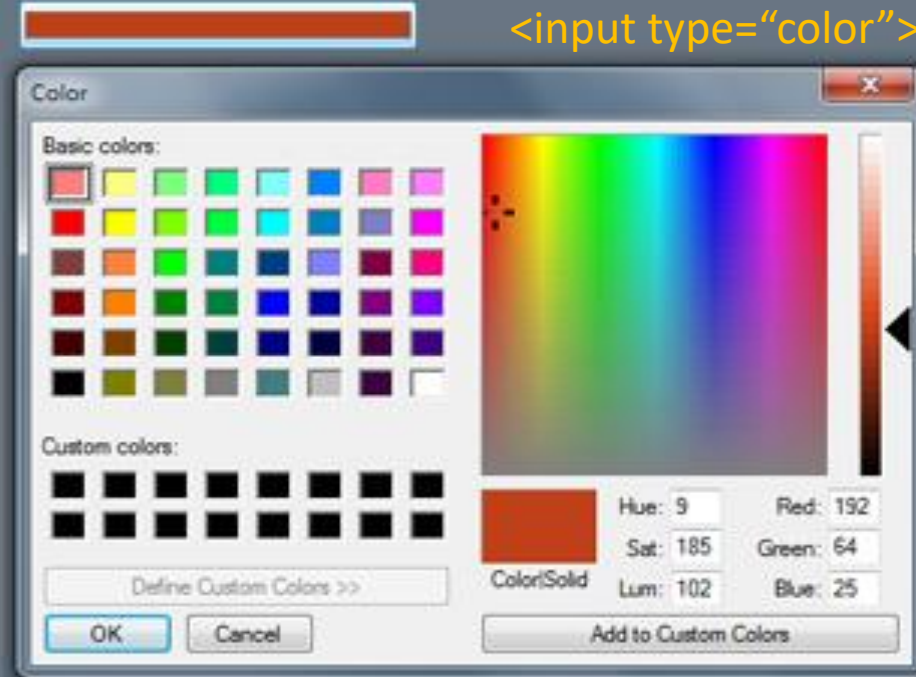

color, number, url, range, search, email, tel Input Types

`<input type="url">`

Search stores:

Amazon.com
Apple Store

Accessibility Issues

label, fieldset and legend

- It is essential to consider how users without the benefit of visual browsers will be able to understand and navigate through your web forms.
- The `label`, `fieldset`, and `legend` form elements improve accessibility by making the semantic connections between the components of a form clear. The resulting markup is not only more semantically rich, but also more elements available to act as “hooks” for style sheet rules.

fieldset and legend (Try Ex. 9.4)

Legend

Personal Data Form

Name

Address

Phone

<fieldset> <!-- omitted name and other details
not related to form structure -->

<legend>Personal Data Form</legend>

<label>Name <input type="text"></label>

<label>Address <input type="text"></label>

<label>Phone <input type="text"></label>

</fieldset>

Personal Details

Address Details

City:

Zip Code:

Telephone Details

Home:

Cell:

Form Layout and Design

- Usable Forms
- Avoid unnecessary questions
- Consider impact of label placement.
- Choose input types carefully.
- Group related inputs
- Clarify primary and secondary actions.
